## Bath & EcoBath 4's

### IN-SERVICE HANDOUT

### CLINICAL APPLICATION

The 4 cloth resealable pack is a partial bath or post op wash product. Its prime end uses are:

**Partial bath (saves waste from larger packs) - eg. Where a small 'top & tail' is required; pad changes or peri care.**

**Post op washes:** to remove pre op scrubs - post op eg. Iodine.

### PREPARATION

Please ask the patient / resident how they would like their bath/wash prepared:

**Warm:** Microwave the sealed pack for 10-15 seconds (micro heat stickers available to record ideal heat setting, place sticker on the microwave). Always check the cloth temperature before application to the person.

**Chill:** If the patient is febrile or it is a hot day you may chill the sealed pack in refrigeration for (5-10) minutes.

**Other:** Simply use the soft cloths straight from the pack at pack temperature.

### HOW TO USE

Simply determine the area(s) to be cleansed. Wipes are used in the same manner as washers.

Remove one cloth at a time. Having completed using the second cloth, the first area cleansed will have dried - no need to towel dry. As each wipe contains emollients and a skin conditioner there is no need to add further moisturiser unless directed.

Dispose of soiled cloths in the normal garbage system, never in the toilet.

*NB: There is no build up on the epidermis with repeat use. The surfactant removes all residue and applies the nurturing solution again.*

### CONTRAINDICATIONS FOR USE

Not to be used for wound cleansing.

### EVIDENCE BASED STUDIES (2)

1) Independent studies<sup>1</sup> show that our single preservative prevents the growth of gram +ve and gram -ve (S aureus, P aeruginosa), eColi, MRSA, A niger and C albicans

2) Independent consumer dermatological studies<sup>2</sup> at a research lab in the USA. There were no negative outcomes, no allergic reaction or sensitivity.

### PRODUCT SAFETY

Each manufactured batch is subject to repeat QA at our Sydney laboratory prior to distribution.
